## CHAPTER 1. INTRODUCTION

The Department of Defense and the individual Services must understand the backgrounds, attitudes, and motivations of young men and women, and their intentions to serve in the military to target recruiting efforts effectively. The Youth Attitude Tracking Study (YATS) provides data on these issues for the active Services from 1975 through 1982. The Youth Attitude Tracking Study II (YATS II) provides data on these issues for the active military and the Reserve Components since 1983.

This document presents tabulations for the 1989 Youth Attitude Tracking Study II (YATS II). These tabulations show the distributions of responses to the questions asked during the 30-minute telephone interview for the study.

### Organization of the Tabulation Volume

This first chapter introduces the 1989 YATS II tabulations and provides an overview of the YATS survey series. It gives background on the project and includes a discussion of the 1989 project objectives, questionnaire content, sampling procedures, data collection activities and survey performance rates.

The second chapter of the report is a guide to reading and interpreting the crosstabulations presented in this volume. It presents the format used for each of the tables, describes how to read the tables, and notes items omitted from the tabulations.

The third and fourth chapters are the main sections of the volume and contain the tabulations. The third chapter contains the active Service propensity tables and the fourth chapter contains the Reserve Component propensity tables. In these chapters each questionnaire item is tabulated by active or reserve propensity for each of the four market groups of interest to the military:

- Young males aged 16-21,
- Older males aged 22-24,
- Young females aged 16-21, and
- Older females aged 22-24.

Questionnaire items are presented in the same order that they appear in the survey instrument.

The report also contains two technical appendices. Appendix A presents an item cross reference for YATS questionnaires from 1983-1989. Appendix B presents the 1989 YATS II screener and questionnaire.

### Overview of YATS Survey Series

The YATS survey series began in the fall of 1975 as a semi-annual, paper-and-pencil telephone survey of young males aged 16 to 21. In the fall of 1980, YATS became an annual survey, and females aged 16 to 21 were added. In 1983, several methodological changes, improvements, and refinements were made, and the series was designated as YATS II. These changes included new market coverage, more sophisticated sampling and data collection methodologies, and new analytical approaches.

Expanded market coverage encompassed two approaches. The first approach was to broaden the target age groups. In 1983, older males aged 22 to 29 years were included in the sample. In 1986, this older male market group was redefined to include only 22- to 24-year-olds, and older females in the same age range were added to the study. The second approach to expanding market coverage was to include Reserve Components in addition to the Active Military. Before 1983 the Reserve Component Attitude Study (RCAS) provided data on the Reserves. In 1983, YATS II was reconfigured to merge the former YATS and the non-prior service portion of RCAS into a single study.

A sophisticated sampling design based on the Waksberg random digit dialing procedure was introduced in YATS II. The design allocates the sample across 66 Military Entrance Processing Station (MEPS) areas to meet DoD-specified precision requirements. Using this design, data for the study are obtained with a Computer Assisted Telephone Interviewing (CATI) system. The CATI system manages screening and interviewing activities, issues telephone numbers, and controls call-back appointments. It also controls skip patterns in the questionnaire, permits resolution of inconsistent responses for key questionnaire items, and creates a high quality data set.

Market Facts Incorporated conducted the YATS surveys from 1975 through 1982. The Research Triangle Institute has conducted the YATS II surveys since 1983.

### Project Objectives

The primary focus of YATS II surveys is to assess the propensity--self-reported likelihood--that individuals will enlist in the military. The 1989 wave of YATS II provides current information on the background and attitudes of young adults and their intentions to join the military. This survey was guided by a number of broad objectives:

- Assess current levels of propensity to enlist in the active military service and in the Reserve Components;
- Assess trends in propensity since 1976 to enlist in the military;
- Measure attitudes and motivations of potential recruits, especially as these relate to enlistment propensity; and
- Provide an AFQT-based market segmentation analysis for young males and young females.

The 1989 YATS II survey builds upon the 1983-1988 YATS II surveys to provide an integrated understanding of the factors affecting enlistment propensity of men and women. Interpretative analyses of the data will appear in a series of topical reports.

### Survey Questionnaire

Data for the YATS II survey consist of responses to a questionnaire administered in a 30-minute computer assisted telephone interview. The 1989 questionnaire is similar to the 1988 instrument. Selected items dealing with attitudes toward National Service in 1988 were replaced with items exploring new enlistment incentives that may be offered by the military such as varying levels of benefits to be used for educational expenses or a down payment on a house. New items also examined recruiter contact for the Coast Guard as well as including the Coast Guard as a response option in

questions asking about active duty services. Appendix A provides a cross-reference of items on the 1983-1989 questionnaires which further details the changes from year to year.

The 1989 survey screener and questionnaire for YATS II appears in Appendix B and consists of four sections. Section A consists primarily of education and employment items. Sections B and C contain items about propensity toward the active Services and the Reserve Components, and general awareness about military pay, bonuses, educational benefits, requirements of the Reserve Component, and other selected issues. Section D contains items on advertising, recruiter contact, and respondent demographics.

In the 1989 YATS II questionnaire, responses to some questions routed the interviewers to other questions or led them to skip over one or more questions that did not pertain to a particular respondent. These skip patterns helped minimize respondent burden while obtaining the necessary information. For example, respondents who said they did not plan to attend school or a training program in the fall (Question 407) were not asked about the kind of school in which they would be enrolled (Questions 408A-409A). The latter questions (called "filtered" questions) were asked only of the subset of individuals who were planning to attend school. Accordingly, fewer individuals responded to filtered questionnaire items than to the questionnaire as a whole. Routing (skip) pattern instructions appear in the questionnaire (Appendix B).

Questions 520, 521, and 554-563 apply only to active duty service and appear only in Part 1 tables. Questions 571-582 apply only to service in the Reserve Components and appear only in Part 2 tables. The numbers of analysis interviews for these subsets of items and for the total study appear in Table 1.1. Note that except for young males on questions 571-582, all other items were asked of all respondents.

**Table 1.1. Question Sets and Number of Respondents**

| Tabulation Part       | Question Sets                 | Young Males | Older Males | Young Females | Older Females |
|-----------------------|-------------------------------|-------------|-------------|---------------|---------------|
| All respondents       | 402-443<br>501-518<br>601-717 | 5,801       | 1,178       | 3,479         | 1,117         |

| Reserve only (Part 2) | 571-582                       | 2,870       | 1,178       | 3,479         | 1,117         |

Note: Item numbers 444-500, 519, 526-553, 564-570, and 583-600 were not used in the questionnaire. Table entries indicate the total number of analysis interviews for the question sets. Missing data and questionnaire routing (skip) patterns cause variation in the numbers responding to specific items.

#### Sampling Design Overview

The 1989 YATS II survey was designed to obtain information from four market groups of interest to the military: young males, older males, young females, and older females. To be eligible for inclusion in this study, individuals had to reside in the continental United States in households or noninstitutional group quarters with telephones. This includes households of traditional nuclear families, or households of up to 10 unrelated individuals living together who share the same phone (e.g., roommates in an apartment). Students in college dormitories were included if they had private phones in their rooms but were excluded if they were served only by a central hall phone. Individuals who had completed more than two years of college were not eligible. Military personnel, including those in the Delayed Entry Program and those with prior Military Service (other than high school ROTC), were excluded.

The sample size and allocation for each of the four markets were determined from DoD specifications of precision requirements for estimates of propensity. Young males were the market of primary interest for YATS II and, accordingly, the sample size was determined by the number of households needed to meet the precision requirements specified for this group. Since the number of households required to meet the sample size for young males produced more eligible individuals for the other three market groups than were needed to satisfy the precision requirements, subsamples of these groups were selected for interview.

The YATS II sampling design is based on the Waksberg random digit dialing procedure. Under this procedure, telephone numbers are called in two stages to identify households. First-stage calls are made to randomly selected telephone exchanges. Exchanges yielding a household on the first number called are designated as clusters. In the second stage, numbers within these clusters are generated to find additional households. This approach is efficient because many exchanges have disproportionately high percentages of residential telephone numbers. When the first call to an exchange reaches a household, subsequent calls to the same exchange are more likely to reach households than when the first call to an exchange does not reach a household.

#### Data Collection Overview

The 1989 YATS II used a Computer Assisted Telephone Interviewing (CATI) system for all phases of the data collection. With this system, questionnaires for screening (eligibility determination), interviewing and verification are programmed, entered, and stored within the computer. Instructions and questionnaire items appear on the screen in the proper sequence, greatly simplifying the interviewer's task and allowing for the resolution of inconsistent, invalid, and incomplete responses as an ongoing part of the interview.

Data were collected in a two-phased approach from July 23 to November 10, 1989. Phase 1 consisted of dialing to identify households, and Phase 2 consisted of screening households to identify members eligible for the study and then interviewing these individuals. Overall, 268,736 telephone numbers were called to identify 107,952 households. From these households, 13,953 eligibles for the study were identified and selected for interviews. Analyses for the study were based on 11,575 interviews.

#### Survey Performance Rates

Performance rate information is important to assess the quality of survey field operations and the potential for nonresponse bias in the data. Table 1.2 presents two performance rates of interest: interview completion rates and overall response rates for each of the four market groups.

Table 1.2. Survey Performance Rates

| Performance Rate          | Market Group   |                |                  |                  |
|---------------------------|----------------|----------------|------------------|------------------|
|                           | Young<br>Males | Older<br>Males | Young<br>Females | Older<br>Females |
| Interview Completion Rate | 77.3           | 67.9           | 76.9             | 74.9             |
| Overall Response Rate     | 74.2           | 65.3           | 73.0             | 71.4             |

Note: Tabled values are percentages.

As shown in Table 1.2 interview completion rates, computed as the percentage of completed interviews out of the total number of eligibles selected, were highest among young males and young females followed by older females and older males. Final response rates, which were computed by multiplying the interview completion rates by the household screening rates, followed the same ranking noted for completion rates.

Numerous calls and attempts to overcome initial refusals were conducted to complete household screening for all sample telephone numbers and to administer a questionnaire to all selected eligibles. A thorough effort was made to obtain high response rates within the given schedule constraints.

## CHAPTER 2. HOW TO USE THIS VOLUME

This chapter provides assistance in reading the YATS II tabulations. The first section describes the measurement of active and reserve propensity which are used in the tabulations. This is followed by a discussion of the composition of the tabulation tables and an example of the tabulation format.

### Measurement of Propensity

Propensity refers to the self-reported likelihood that an individual will enlist in the military in the next few years. The 1989 YATS II survey assessed propensity to serve in the Active Services and propensity to serve in the Reserve Components. Tabular results are presented in two parts:

- Part 1 tables showing Composite Active propensity, and
- Part 2 tables showing Composite Reserve Propensity.

Composite Active Propensity was based on four questions assessing the likelihood of serving in the Army (Q510), the Navy (Q513), the Marine Corps (Q512) or the Air Force (Q511).

These questions were asked with the following format:

Now, I'm going to read you a list of several things which young (men/women) your age might do in the next few years. For each one I read, please tell me how likely it is that you will be doing that.

How likely is it that you will be serving on active duty in the (Army, Navy, Marine Corps, Air Force)? Would you say...

Definitely;  
Probably;  
Probably not; or  
Definitely not?

Composite Active Propensity was constructed as the most positive response given to the four questions. Individuals who indicated that they would

"probably enlist" in the Army but "probably not enlist" in the Navy, the Air Force, or the Marine Corps, for example, were assigned a value of "probably enlist" on the Composite Active Propensity measure. Respondents with values of "definitely enlist" or "probably enlist" on the composite measure were defined as having "positive propensity". Respondents whose values on the composite measure were "probably not," "definitely not," "don't know," or "refuse" were defined as having "negative propensity."

Composite Reserve Propensity was based on two questions, one about joining the National Guard (Q505) and the other about joining the Reserves (Q507). The questions were as follows:

How likely is it that you will be serving in the (National Guard or Reserves)? Would you say...

Definitely;

Probably;

Probably not; or

Definitely not?

A Composite Reserve Propensity measure was formed from these two items and was constructed in the same manner as the Composite Active Propensity measure.

Composite Reserve Propensity computed for the 1984-1989 YATS II tables differs from the Composite Reserve Propensity measure computed for the 1983 YATS II tables. The computations in the latter years are based on the two items used in the RCAS. Thus, results using Reserve propensity for 1983 are not directly comparable to those for 1984-1989. In contrast, Composite Active Propensity is based on the same items for the seven years and results are comparable.

#### Tabulation Composition

The purpose of the tabulation volume is to provide an overview of the 1989 YATS II survey results. Data tables present two types of information:

- Marginal response distributions for each market group; and
- Cross tabulations of questions with the key analysis variables of Composite Active Propensity and Composite Reserve Propensity.

Figure 1 presents an example of a tabulation page. The numeric indicators on Figure 1 are identified and their referents described on the following explanation page. Tables present percentages based on the sample data weighted to yield population counts.<sup>1</sup> Additionally, the bottom row of the tables shows the actual number of respondents on which the weighted estimates in the columns are based.

Because of considerable variation in the design effects associated with individual questions, generalized standard errors are not provided for the tables. Data from the tables should be used for determining how respondents reacted to individual questions or sets of questions and for framing questions about issues that may be of further analytical interest. It is not appropriate to use these data to make comparison statements about significant differences.

---

<sup>1</sup>It is necessary to weight the sample results primarily because respondents were chosen with non-random selection probabilities based on the 1989 study's stratified two-stage sample design. In order to include respondents from less-populated areas (MEPS) to support reliable estimates and in order not to waste resources by questioning more respondents from heavily populated areas than are needed to make reliable estimates, sample members were selected with probabilities disproportionate to their representation in the population. Sample weighting basically multiplies the respondents by the inverse of their original selection probabilities to reestablish their impact on estimates proportional to their representation in the population. Then, within each MEPS, the weights are adjusted to account for nonresponding households and nonresponding eligibles identified in a household. In addition, the weights account for multiple households contacted using a single telephone number and for households that could have been contacted using multiple telephone numbers. As a result, the weighted percentages presented in this report are unbiased estimates of national percentages.

## EXPLANATION OF FIGURE 1: EXAMPLE OF A TABULATION PAGE

- ① Composite Propensity Measure used in the table. ACTIVE PROPENSITY refers to propensity to join at least one of the Department of Defense Active Services (Army, Navy, Marine Corps, Air Force). RESERVE PROPENSITY refers to propensity to join the National Guard or Reserve Components. See the text for definitions of how propensity is measured.
- ② Survey Question item.
- ③ Abbreviated label for the questionnaire item.
- ④ Label defining the Market group.
- ⑤ Response alternatives for the questionnaire item.
- ⑥ Percentage of respondents expressing positive propensity. Care must be taken to interpret this as a column percentage. Percentages are within market group and level of propensity. (For example, of the young males with positive propensity, 18.9 percent reported the 12th grade as their highest grade completed).
- ⑦ Percentage of respondents expressing negative propensity. Care must be taken to interpret this as a column percentage. Percentages are within market group and level of propensity. (For example, of the young males with negative propensity, 33.0 percent reported the 12th grade as their highest grade completed).
- ⑧ Total percent for each market group excluding propensity. (For example, 28.5 percent of the young males reported the 12th grade as their highest grade completed).
- ⑨ Column Percentage total. In most tables, the total will be 100 (percent). In some tables multiple responses are permitted for as many as 4-11 alternatives.
- ⑩ Count. Unweighted number of respondents on which the weighted estimates of the columns are based. These numbers can be used, roughly, to judge the relative reliability of the estimates; estimates based on a small number of respondents are less reliable than those based on larger numbers.

CHAPTER 3. PART I: COMPOSITE ACTIVE PROPENSITY TABLES

The propensity measure used for the tables in this section is Composite Active Propensity. Composite Active Propensity is based on responses to questions regarding the likelihood of serving on active duty in the Army (Q510), Navy (Q513), Marine Corps (Q512), or Air Force (Q511). The response options for each of the items were "definitely enlist," "probably enlist", "probably not enlist", and "definitely not enlist."

Composite Active Propensity is defined as the most positive response given to any of the four questions assessing propensity to enlist in the individual active duty services. A respondent who indicated that he or she would "probably enlist" in the Army but "probably not enlist" in the Navy, the Air Force, or the Marine Corps, for example, was assigned a value of "probably enlist" on the Composite Active Propensity measure. Individuals with values of "definitely enlist" or "probably enlist" on the composite measure comprise the positive propensity category shown in the tables. Individuals with values of "probably not enlist," "definitely not enlist," "don't know", or "refuse" comprise the negative propensity category shown in the tables.

CHAPTER 4. PART II: COMPOSITE RESERVE PROPENSITY TABLES

The propensity measure used for the tables in this section is Composite Reserve Propensity. Composite Reserve Propensity is based on responses to two questions regarding the likelihood of serving in the National Guard (Q505) or in the Reserves (Q507). The response options for each of the items were "definitely enlist," "probably enlist", "probably not enlist", and "definitely not enlist."

Composite Reserve Propensity is defined as the respondent's most positive response to the two questions assessing propensity for the National Guard or Reserves. Individuals who indicated that they would "probably enlist" in the National Guard, but "probably not enlist" in the Reserves, for example, were assigned a value of "probably enlist" on the Composite Reserve Propensity measure. Individuals with values of "definitely enlist" or "probably enlist" on the composite measure comprise the positive propensity category shown in the tables. Individuals with values of "probably not enlist," "definitely not enlist," "don't know", or "refuse" comprise the negative propensity category shown in the tables.

Composite Reserve Propensity presented in these tables is the same as that in the YATS II supplementary tables for 1984 through 1988 but differs from the Composite Reserve Propensity measure computed for the 1983 YATS II tables. The 1983 measure was based on six items taken from the Reserve Component Attitude Study rather than the two items used here. Thus, 1989 results of Composite Reserve Propensity are directly comparable to the results from 1984 through 1988 but not the results for 1983.

716 Finally, I would like to ask for your Social Security Number. You have provided a great deal of information about your attitudes toward the military and interest in joining the military. It improves our ability to analyze these data if we can relate the attitudes and opinions of all study participants to later enlistments in the military. To be able to do this, we need your Social Security Number. As with all other questions, providing this information is voluntary, nothing will happen if you do not provide it, and you are protected from unauthorized uses by the Privacy Act of 1974. Recording this number is authorized by Executive Order Number 9397.
